Address - Greater Noida, Uttar Pradesh, India

About Me

Second-year B.Tech CSE-AI student at NIET, Greater Noida, passionate about building practical tools using Python and Flask, with a strong interest in automation and AI-integrated systems. I learn by building — taking ideas from concept to deployed product. Looking to contribute to real-world software projects while growing in a professional environment.

Education

B.Tech — Computer Science Engineering (AI)

Noida Institute of Engineering and Technology, Greater Noida

Class XII — Science (PCM + CS)

ISC Board

Indian School Certificate (ISC)

Class X

ICSE Board

Indian Certificate of Secondary Education (ICSE)

Skills & Projects

Technical Skills:

- **Languages:** Python, JavaScript, HTML, CSS
- **Frameworks & Libraries:** Flask, React, LangChain / LangGraph, discord.py
- **AI / ML Tools:** Ollama (LLaMA 3.3 70B, gemma2:2b), Replicate, Tavily Search, LangChain Agents, Groq
- **Tools & Platforms:** Git, GitHub, Render, Replit, VS Code, PyCharm
- **Concepts:** REST APIs, DSA (Hash Maps, Linked Lists, Binary Search)

Projects:

Gov Awareness | React · Flask · LangChain · Groq · Tavily

- Web app helping Indian citizens discover government schemes and understand their legal rights.
- Implemented a ReAct agent using LangGraph's create_react_agent with Tavily web search and Groq LLaMA 3.3 70B.
- Deployed to Render with a Flask backend and React frontend; publicly accessible via GitHub.

Beru Bot — AI Discord Bot | discord.py · Groq · Replicate · Render

- AI-powered Discord bot for automated content generation including text and video.
- Deployed on Render with full dependency resolution and environment pinning (Python 3.11.9).
- Built a custom web dashboard with dark/light theme toggle.

Warehouse Management System | Python · Flask · DSA

- Flask-based system implementing core DSA concepts: hash maps, binary search, and a linked-list stack for undo functionality.
- Built as a DSA academic project with a focus on real-world applicability of data structures.

SYNC — Student Team-Builder Platform | Flask · HTML/CSS

- Platform prototype for students to find and connect with project teammates, featuring college email verification and profile pages.
- Pitched at Imperia hackathon event with a warm minimal UI aesthetic.

Voluntary Experience & Traits

Hackathon Participation

- Participated in multiple hackathons (Imperia hackathon, Glitch and giggle hackathon, Steminate hackathon, FarAway hackathon, RateFluencer hackathon) independently as well as with team, building and deploying projects under time constraints.
- Experience with full-stack submissions: frontend, backend (Flask), AI agent integration, and cloud deployment (render, replit).
- Developed resilience and problem-solving habits through repeated iteration and self-directed debugging.

Professional Traits

- Problem-solving and self-learning mindset — learns by building real projects from scratch.
- Team collaboration and coordination — experienced working in group development settings.
- Adaptable to new tools and technologies quickly — picks up frameworks independently.
- Attention to detail in debugging and code quality — thorough and methodical approach to fixing issues.
- Strong interest in automation, bots, game development, and AI/ML-integrated systems.
